### Product Specifications - Courthouse Directory

#### Courthouse Directory Software

Designed for use in courthouses and judicial centers, the REDYREF™ Touch Screen Courthouse Directory provides visitors with a complete directory and wayfinding system. This electronic directory is quick and convenient. The system provides continuously updated list of court proceedings and locations. Visitors can access the information interactively with a touch screen interface, or passively by placing large monitors and/or a series of monitors together similar to airport departure screens. The courthouse directory can be located in the lobby, at the elevator bank and/or outside each courtroom. Computerized directories allow visitors to view the courtroom with out the hassle, delay and expense of paper.

In the interactive configuration, each listing may be linked to detailed information, including full descriptions of the event proceedings, as well as an optional wayfinding map.

#### Updating the Directory - *Easy as can be!*

- Data updating is done either directly through the database application, using the on-screen keyboard, or using WebUpdate™. WebUpdate™ allows authorized users to edit the database information from any computer with a browser and web-access.
- Integrating directly to the court docket allows all updating to be done automatically, displaying real time information.
